CIT 140 · Week 4 · Cedar Junction

Validated Requirements Set

Learner name not entered · Revision 2192

R-01 · functional

Requirement: The system needs to distinguish between Scheduling Held and Intake Held instead of using a single state = "Held".

Source: W04-S01 · Dana Ruiz

Rationale: Staff needs to determine next step based on held status (confirm appointment vs visitor hasn't arrived yet).

Acceptance check: Create multiple appointments with 2 different conditions and confirm status displays correctly.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: Scheduling Hold and Intake Hold will be treated as separate statuses so staff can tell which condition applies. The status view will also identify who changed it and the next

R-02 · user

Requirement: The system needs to display User who updated appointment status and next step.

Source: W04-S01 · Dana Ruiz

Rationale: Intake staff need context to guide patient to correct next step without having to call around.

Acceptance check: Change appointment status then validate Intake can see user information.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: Scheduling Hold and Intake Hold will be treated as separate statuses so staff can tell which condition applies. The status view will also identify who changed it and the next

R-03 · business

Requirement: Same day appointments must meet criteria: both a room and a qualified clinician are confirmed as available.

Source: W04-S02 · Dr. Lena Okafor

Rationale: A calendar opening alone does not prove that a visitor can be received.

Acceptance check: Create 2 appointments, 1 following requirement criteria and the other not. Validate both rooms show correct readiness status.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: A same-day appointment will not be treated as clinically ready until both a room and qualified clinician are available. If readiness changes after confirmation, staff and the visitor will receive an updated expectation without unnecessary clinical details.

R-04 · functional

Requirement: The system shall display real time readiness status to users.

Source: W04-S02 · Dr. Lena Okafor

Rationale: Intake needs accurate readiness in real time to determine if available to visitor.

Acceptance check: User changes status and validates that status updates display correctly for intake.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: A same-day appointment will not be treated as clinically ready until both a room and qualified clinician are available. If readiness changes after confirmation, staff and the visitor will receive an updated expectation without unnecessary clinical details.

R-05 · user

Requirement: Authorized staff shall be able to view the visitor's: language, communication, and approved support needs throughout confirmation, rescheduling, and check-in.

Source: W04-S03 · Priya Shah

Rationale: Staff should have same access to information thus preventing visitor from re-explaining themselves.

Acceptance check: Create appointment and review in Access/Intake, validate all listed items in requirement is visible and accurate.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Approved language, communication, and support needs will follow the appointment through confirmation, rescheduling, and check-in for authorized staff. Visitors who cannot use the portal will have an equivalent phone or staff-assisted option.

R-06 · constraint

Requirement: An alternative phone/staff-assisted process mirroring current process shall be available when a visitor can't use portal.

Source: W04-S03 · Priya Shah

Rationale: Access to the service cannot depend on a single digital channel.

Acceptance check: Generate an appointment with portal, generate appointment without portal and validate an alternative hone/staff-assisted process works.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Approved language, communication, and support needs will follow the appointment through confirmation, rescheduling, and check-in for authorized staff. Visitors who cannot use the portal will have an equivalent phone or staff-assisted option.

R-07 · nonfunctional

Requirement: Shared displays shall show only the minimum information required for staff to perform their task, while detailed information shall be restricted based on role and authorized access.

Source: W04-S04 · Jordan Kim

Rationale: This protects visitor privacy while still giving staff enough information to complete their work.

Acceptance check: Compare views and validate only minimum information is displayed based on user permissions/access.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays will show only the minimum information staff need, with detailed access controlled by role. Status changes will retain who made the change, the previous and new values, and the time for later review.

R-08 · functional

Requirement: The system shall record each status change with who made the change, the previous value, the new value, and the time of the change.

Source: W04-S04 · Jordan Kim

Rationale: Staff need a reliable history to understand what happened during an exception review.

Acceptance check: Change an appointment status and verify the audit history records all four required details and remains available for review.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays will show only the minimum information staff need, with detailed access controlled by role. Status changes will retain who made the change, the previous and new values, and the time for later review.

Professional Guidance Assessment

IIBA: IIBA contributes by providing a structured framework for business analysis. It helps guide analysts through planning, gathering and validating information, managing requirements, analyzing solutions, and evaluating whether the final solution meets the business need.

ISO/IEC/IEEE 29148: ISO brings national standards bodies together to develop internationally agreed standards. IEC develops standards for electrical, electronic, and related technologies. IEEE Supports technical communities through standards, publications, conferences, and education.

PMI: PMI is related because project management and business analysis overlap during planning and implementation but it's not the main Week 4 source because this week is focused specifically on defining and managing requirements covered by IIBA and ISO/IEC/IEEE 29148.

Application: It helped me to clearly state what needs to happen, why it matters, and how someone could check that the requirement was actually met.

Prepared in Command Nexus. Canvas remains the official submission point.
