MERIDIAN FORGE / WEEK 03 / ANALYST DOCUMENT

Stakeholder Map

Craig Temple Week 03 Who has a Stake? · Revision 879

Proposed QA Control Review / participation and decision rights

PEOPLE Who is affected?	RELATIONSHIPS Who contributes and decides?	NEXT CONVERSATIONS What needs confirmation?

1. People and roles

QA and night-shift operators

Nia needs the original evidence preserved and review sessions scheduled around shift duties. Night-shift operators are directly affected because they use the cell overnight and should be represented when checking the workflow.

Engineering

Elias interprets command and scheduler records and checks technical conclusions.
He needs read-only exports with source details and input from the record custodian.
His expertise does not establish ownership of the records, spending authority, or prove that a restart will solve the issue.

Operations

Mara coordinates the review, needs a clear summary and decision route, and will carry the Week 2 recommendation forward. She can help confirm contacts and missing participants, but she is not established as the spending approver.

Sponsor and record custodian

QA: Participates in the review and represents QA needs; night-shift representation still needs to be confirmed.
Engineering: Provides technical expertise; does not automatically have record ownership or approval authority.
Ops: Coordinates the recommendation and routes it to the sponsor.

> Record Custodian: Responsible for record/source access, but no named contact or acceptance is confirmed.
> Sponsor: Can authorize the proposed work, but the individual, specific authority limits, and approval are not identified or confirmed.

2. Relationships and next steps

> **Competing needs and tradeoff**
>
> Ops proposed a daytime meeting, but Nia recommends Night Shift be present because they actually use the cell overnight. One method is to hold the daytime meeting and either ask for night shift employee to come to the meeting or have them review comments from day shift and add any extra details.

> **Consultation plan**
>
> Consult:
> Nia/QA about evidence preservation and shift needs.
> Elias/Engineering about technical interpretation and required exports.
> Mara/Ops about coordination and the decision route.
> The record custodian should be identified and consulted about source details and access, and a night-shift operator should be selected to explain the actual overnight workflow. These can be short interviews or meetings before detailed requirements gathering. A night-shift operator may have little formal authority but still needs a voice because they directly use the affected cell and understand the actual workflow.

> **Missing voices and validation**
>
> Two unresolved questions are who the record custodian is and who holds the sponsor/authorization role and what their limits are. Mara should seek confirmation of the appropriate contacts, and their responses should be recorded in the stakeholder/authority record.

> **Next step toward requirements**
>
> Before detailed requirements interviews, confirm the record custodian, night-shift participant, sponsor/decision authority, and participant availability. The stakeholder map identifies who should be consulted, affected, advising, or authorizing so the right people can be invited. It organizes the review but does not authorize the project or spending.

3. Book evidence connection

> **Book form connection**
>
> The stakeholder map and identity questions improved my consultation by guiding me in identifying who has insight on the affected matter and why they're important in being brought in on the discussion. This is

> essential to ensure decisions incorporate input from actual users and not just sponsors/reps at the top who normally approve decisions.
